

PARTIAL AND DENTURE HOME CARE INSTRUCTIONS

STORAGE: Place your appliance in a water filled container. You may add mouthwash to give it flavor.

CLEANING: Twice daily, clean your appliance with the recommended toothbrush and only use liquid soap such as Dawn, Joy, etc. Toothpaste is too abrasive and will ruin the acrylic. Once a week soak your appliance in a cleaner for partials or dentures. Please bring your appliance with you to all appointments so that we may clean them for you.

MAINTANCE: Should you appliance become loose and sore areas develop, contact our office for an appointment. To soothe sore areas, you may rinse several times a day using warm salt-water. Dissolve ½ tsp of salt in a cup of warm water. Let your gums rest by not wearing your removable appliances while you sleep.

If you have any questions or concerns, please contact our office at (817) 431-5514.
